# AI SIGHTS AND WHAT ARE THEY FOR?

- Chat GPT- In response to text prompts such as questions or instructions, it will output text in any form, including prose, poetry, and even computer code. Also will continue to improve response and “narrow” things down.
- Midjourney - This program is responsible for kick-starting the current wave of consumer interest in generative AI. This one takes text prompts and transforms them into computer graphics (images, photos, drawings, paintings, etc.). *This made the profile on my intro page... used a headshot, asked it to shorten my hair and make me a cartoon!*

# MIDJOURNEY EXAMPLE

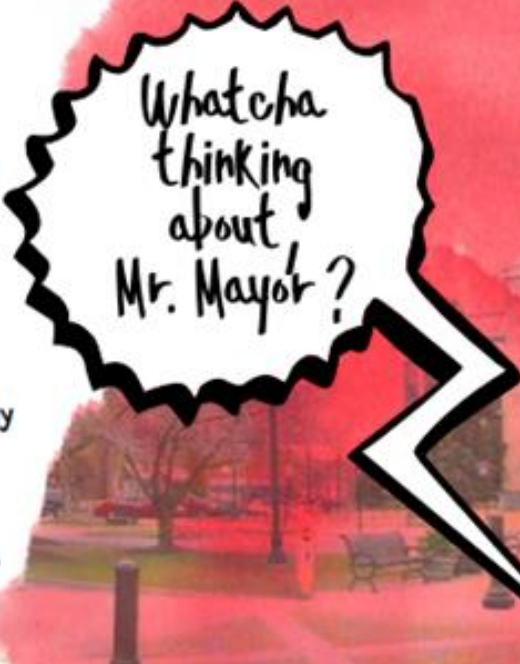

Welcome to the City of Suwanee's 2023 Annual Report. If you have lived in Suwanee for a while, you are aware that we like to take a more engaging approach to sharing our city-centric accomplishments.

If you are new to Suwanee and receiving your first report, welcome! We hope our efforts towards providing facts, figures, and information in a light-hearted and fun way brings you closer to our one-of-a-kind community.

This year's report focuses on a curious little girl and her quest to understand why our Mayor is so excited about Suwanee.

Join us on this adventure and scan the QR codes along the way to dig a little deeper.

Once upon a time, as the Mayor of Suwanee meandered through Town Center, he happened upon a small girl who just wouldn't stop asking one small question... "Why?"

- Cleanup.Pictures - This AI tool lets you retouch images by removing unwanted objects, defects, or even people, using a process known as “inpainting” to help you create the perfect image.
- Within CANVA – use magic expand to extend photos and keep them realistic. Good to make an image appear “smaller” in a photo.

- Adobe FireFly – text to image generator. Gives options and you can pick the best one and keep refining it! “owl eating a taco”

- Show me a taco poster that says I love tacos

# HOW CAN AI HELP ME WITH EVENTS?

- This is only as good as the information you provide.
- It is NOT a mind reader.
- It is an idea generator that can move you in a direction.
- It is still early and many of these programs will probably end up in existing programs we use.
- Text prompts do not generate feelings so it can't read your "gut"
- This is sometimes to get the ball rolling and you have to pick up the ball and "throw" it again.
